

BUILD YOUR FOUNDATION

Functional and beautiful, hardscapes are an important part of every landscape design. Garden walls, pathways, patios and even driveways can add interest and curb appeal to your landscaping, while retaining walls are necessary for protecting sloped areas from erosion. No matter how you incorporate hardscapes, it's critical to do it right the first time. High performance products and professional installation are key to ensuring your investment stands the test of time.

Walls

We sell and install a diverse selection of decorative and high performance retaining wall systems for residential and commercial use. These walls can be installed to amazing heights, using a wide variety of colors, sizes and textures and can be engineered to handle extreme loads. We can create sharp turns, smooth curves and straight lines, building upon your ideas and our imagination. We can turn sloped ground into open, usable spaces and we can create areas around your yard to highlight trees, bushes, shrubs and flowers.

Pavers

A large variety of paver sizes, styles and colors are available to help complement your property and perform under all kinds of weather. Your new patio, path or driveway can be designed and installed to fit your dreams and your budget, by professionals who understand how to protect your investment from the punishing effects of time and Mother Nature. For small, simple spaces on level ground, we do offer DIY paver kits with full instructions to help you along the way.

Let's get started

Talk to our design professionals about the best ways to enhance and protect your landscaping using pavers and retaining wall block.
